                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Screening test substances for preventing or treating disease involving oxidative stress, by testing test substances for its ability to inhibit activity of GADD34L and identifying test substance that inhibits activity of GADD34L.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to a method of screening several test substances for preventing or treating diseases involving oxidative stress such as neuronal ischaemia, heart ischaemia, renal damage induced by ischaemia or toxins, autoimmune diseases and neurodegenerative disorders. The method involves testing the test substances for its ability to inhibit the activity of GADD34-like (GADD341), also referred to as eIF2alpha-specific regulatory subunit of phosphatase, and identifying the sequence which inhibites the activity of GADD34L. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SYWTKLLSQLLAPLPGLLQKVLIWSQLFGGMFPTRWLDFAGVYSALRALKGREKPAAPTA 120

The present invention describes primer sets for synthesising 5602 full-
length cDNAs defined in the specification. Where a primer set comprises:

(a) an oligo-dr primer and an oligonucleotide comprises one of the 5602
complementary strand of a polynucleotide which comprises one of the 5602
oligonucleotide comprises at least 15 nucleotides; or (b) a combination
of an oligonucleotide comprising a sequence complementary to the
complementary strand of a polynucleotide which comprises a 5'-end
sequence and an oligonucleotide comprising a sequence complementary to the
complementary strand of a polynucleotide which comprises a 5'-end
sequence and an oligonucleotide comprising a sequence complementary to the
complementary strand of a polynucleotide which comprises a 5'-end
sequence and an oligonucleotide comprises a 1'-end sequence, where the
oligonucleotide which comprises a 1'-end sequence, where the
oligonucleotide opprises at least 15 nucleotides and the combination of
the 5'-end sequence[3'-end sequence] selected from those defined in the
gene therapy. The primers are useful for synthesising polynucleotides,
particularly full-length cDNAs. The primers are also useful for the
converse of detection and/or diagnosis of the abnormality of the full-length
cDNAs easily without any specialised methods. AAH13612 represent
ceptesent human amino acid sequences; and AAH13622 to AAH13612
ceptesent human amino acid sequences; and AAH13622 trepresent
ceptesent human amino acid sequences; and AAH13622 trepresent
diagnosis of the abnormality of the proteins encoded by the full-length
                                                                                        8; SEQ ID NO 18965; 2537pp + Sequence Listing; English.

called human colon cancer antigens, given in AAB5234 to AAB54006. The human colon cancer antigens can have cytostatic, cardioactive, muscular, neuroprotective, immunomodulatory, gynaecological, gastrointestinal, vulnerary, nephrotropic, antiinfective and antibacterial activities, and can be used in gene therapy. The colon cancer antigen polynuclectides, core be used in gene therapy. The colon cancer antigen polynuclectides, treatment and antibacies to the proteins are useful for the prevention, treatment and diagnosis of colon disorders, such as colon cancer. The polynuclectides may be used in diagnostics and research, such as for chromosome identification, and as hybridisation probes. The proteins may also be used to prevent diseases such as neural disorders, immune system disorders, wounds, renal disorders, reproductive disorders, gastrointestinal cardiovascular disorders, AAC98764 to AAC98772 and AAB54007 represent sequences used in the exemplification of the present invention

g test substances for preventing or treating disease involving e stress, by testing test substances for its ability to inhibit of GADD34L and identifying test substance that inhibits activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         7
                                                                                                                                                                                                                                                                                                  The present invention relates to a method of screening several test substances for preventing or treating diseases involving oxidative stress such as neuronal ischaemia, heart ischaemia, renal damage induced by ischaemia or toxins, autoimmune diseases and neurodegenerative disorders. The method involves testing the test substances for its ability to inhibit the activity of GADD34-like (GADD34L), also referred to as elfalpha-specific regulatory subunit of phosphatase, and identifying the sets substance which inhibits the activity of GADD34L. The present sequence is the mouse GADD34L protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             179
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  174

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAM25963. The proteins can have activities based on the tissues and cells they are expressed in, such as: antinframmancry; antirheumatic; they are expressed in, such as: antinframmancry; antirheumatic; they are expressed in, such as: antinframmancic; cardiant; cardiant; central nervous system; virucide; anti-HIV; fungicide; antimutagen; cardiavascular; antianaemic; antiaggregant; haemostatic; vulnerary; antidiabetic; cytostatic; neuroprotective; antidestessant; nootropic; antidiabetic; cytostatic; neuroprotective; antiasthmatic; antidiabetic; cytostatic; neuroprotective; antiases therapy and vaccine concoling them can be used in gene therapy, antisense therapy and vaccine production. The proteins and polymucleotides are useful for screening for agonists or antagonists of a protein and for the treatment and diagnosis of disorders associated with the activity of a protein e.g. inflammation, reumancial arthritis, septic shock, pancreatitis, cardiac dysfunction, neuropathology, cardiac anaphylaxis, viral, bacterial, HIV and fungal infections, autoimmunity, genetic diseases, haematopoietic disorders

It is encoded by a growth arrest and DNA damage-inducible gene 34. It is used in an assay method for identifying an anti-viral agent that can affect the activity or expression of a nucleotide sequence or its expression product. The assay method comprises contacting an agent with a nucleotide sequence coding for a serine/threonine phosphatase or its expression product, and determining whether the agent affects the activity or expression of the nucleotide sequence. The assay is used for accreaining for anti-viral agents useful in the treatment of human viral infections. The anti-viral modulators of type I protein phosphatase activity inhibit the action of a host component which interferes with the

The invention discusses a composition comprising two or more isolated factor the invention discusses a composition of the nucleic acid sequence. Also derivative or allelic variation of the nucleic acid sequence. Also calaimed are a vector comprising the novel polywuclectide, a method for identifying a nagent that is differentially regulated in an animal subjected to pain and a stray, a method for identifying a nagent that is differentially expression of the polymuclectide sequence that is differentially expression of the polymuclectide sequence that is differentially expression of a polymuclectide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polymuclectides, a method for more of the polymuclectides, a method for identifying a compound useful in treating cativity in an animal of one or more of the polympetides or their antibodies. The polymuclectide or the compound to the sequence utical composition comprising the one or more polympetides or their antibodies. The polymuclectide or the compound that modulates its activity is useful for preparing a medicament for treating pain in trate or pain (e.g. spinal segmental nerve injury (SNI)) in an animal (e.g. gene the sequence data for this patent did not form part of the printed the sequence data for this adifferentially expressed during pain. Note:

XX

New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.

XX

Claim 1; Page; 1017pp; English.

XX

Claim 1; Page; 1017pp; English.

XX

The invention discloses a composition comprising two or more isolated rat or human polymucleotides or a polymucleotide which represents a fragment, derivative or allelic variation of the mucleic acid sequence. Also claimed are a vector comprising the noval polymucleotide sequence. Also claimed are a vector comprising the noval polymucleotide sequence. Also claimed are a vector comprising the properties of the noval polymucleotide sequence which is differentially regulated in an animal subjected to pain an expressed in an animal subjected to pain, a method for identifying a compound which regulates the expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polymucleotide sequence which is differentially expressed in an enthod for identifying a compound that regulates the activity of one or more of the polymucleotides a method for pain, a method for pain, a method for identifying a compound which regulates the activity of one or more of the polymelestics and method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more of the polymelestics and spated nerve injury (SNI) in an animal (Solution and appared one or more of the polymelestics one or more of the sequence data for this patent did not form part of the grain of the printed spatent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at the specification, but was obtained in electronic form directly form part of the printed in electronic form part of the printed in electronic form part of the printed in electr

polymucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound or small molecule that regulates the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polymucleotide or the compound that molympeptides or their antibodies. The polymucleotide or the compound that polympeptides or their antibodies. The polymucleotide or the compound that pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (Ct) and spared nerve injury (SNI)) in an animal (e.g. gene therapy). The sequence presented is a human protein (shown in Table 2 of the sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at the wipo.int/pub/published_pot_sequences.
                                                                                                                                                                                                                                                                                                                                                                                         32;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               635

The present interaction describes primer abers 10.0 syntheorising present interaction describes primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides, or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprises a 3'-end sequence, where the polynucleotide comprises a 1'-end sequence, where the polynucleotide comprises a 1'-end sequence, where the polynucleotide comprises a 1'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primer sets can be used in antisense therapy and in gene therapy. The primer set useful for synthesising polynucleotides, the full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length CDNAs easily without any specialised methods. AAH13618 co AAH13628 represent human amino acid sequences; AAB93446 to AAB95893 represent human amino acid sequences; and AAH13629 to AAH13622 represent the second of the exemplification of the constant of the constant and any appearance of the constant and any sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               present invention describes primer sets for synthesising 5602 full-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention relates to the novel association of protein sequences (and the genes which encode them) to the NP-kappaB pathway. The invention may be useful for the production of compounds with an antininflammatory, cytostatic, hepatotropic, virucide, antiarteriosclerotic, antiarteriosclerotic, gastrointestinal-Gen, antiathmatic, antiarteriosclerotic, carebroprotective, vasotropic, immunosuppressive or vulnerary activity or for gene therapy. The proteins and nucleotides are useful for diagnosing, preventing, treating, or ameliorating conditions or diseases associated with the NP-kappaB pathway. The condition is an immune disorder, an inflammatory disorder.

CC useful for aberrant NP-kappaB requiation, cancer, aberrant apoptosis, hepatic disorders, Hodgkin's lymphomas, haematopoietic tumours, hyper-IgM credermal dysplasia, X-linked anhidrotic ectodermal dysplasia, X-linked anhidrotic cetodermal dysplasia, inflammatory viral infections, HIV-1, hepatitis B, hepatitis C, EBV, influenza, viral replication, host cell cetodermal dysplasia, inflammatory disorders colitis, asthma, atherosclerosis, cachexia, euthyroid sick syndrome, stroke, BAE, autoimmune adsorders related to aberrant acute phase responses, cyperongenital conditions, birth defects, necrotic lesions, wounds, cygan transplant rejection, conditions related to organ transplant corresponders related to aberrant signal transduction, cygan transplant rejection, conditions related to organ transplant cyferion, conditions related to organ transplant cyferiating disorders, cancers and HIV propagation in cells infected with other viruses. The present sequence is that of a human protein which as a bubject to the novel association with the NP-kappaB pathway of the inventive by the index of the invention but appear in the specification but
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   34;

The present sequence represents a human growth regulator protein, designated GRREG. The protein can be used in methods to treat cancer. The protein can also be used in binding assays to detect (ant) agonists of GRREG. A fragment from the nucleic acid sequence encoding GRREG can be used as a probe for detecting GRREG encoding sequences (especially in PCR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  440

The invention relates to an inducible progression-elevated gene-3 (PEG-3 gene) regulatory region functionally linked to a gene encoding a product that causes or may be induced to cause the death or inhibition of cancer cell growth. A vector of the invention which contains a gene encoding thymidine kinase or a product which causes the cell to express a specific antigen can be administered along with gancyclovir or acyclovir, or an antiged, or fragment to the antigen, respectively, to treat cancer in a subject. The PEG-3 gene is useful for generating new cloning and expression vectors, transfected cells, and for developing methods for cultured growth of such cells. The PEG-3 polymucleotide is also useful as a source of primers and probes to study the progression of cancer, and to detect the presence of the gene. The present sequence represents the amino acid sequence of the rat MyDl16 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     231
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        291
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        -----KRLGEVVARREGVAEPAYPTSQLEGGPAENEEDGETVKTYQASAASIAPGYKP 198

is useful for examining the ischaemic condition (e.g. compressive ischaemia, occlusive ischaemia or vasospastic ischaemia) by measuring expression levels of particular genes (AB199202 to AB199912, encoding the protein sequences in AB877020 to ABB57314) or by determining the expression profile of a gene group comprising these genes. The expression indicator when screening for ischaemic condition-improving drugs or therapeutics for ischaemic diseases. AB199913 and AB199914 represent primers for a mouse ischaemic condition related sequence, which are used in the exemplification of the present invention

RESULT 15 AAW79958 ID AAW7

The present invention describes a method for examining ischaemic conditions, comprising measuring the expression levels of particular genes (I) in a test sample or determining the expression profile of a gene group in the sample comprising genes selected from (I). The method

```
This polypeptide comprises human progression elevated gene-3 (PEG-3) protein. The amino acid sequence was deduced from an isolated cDNA clone (see AAV65765). PEG-3 expression (1.5 and 2.8 kb transcripts) is elevated in most human tumour cell lines. The amount of PEG-3 in a cell is also an indicator of DNA damage in that cell. Cells in which a reporter gene in indicator of DNA damage in that cell. Cells in which a reporter gene in control of the promoter or regulatory region (see AAV65766) of the rat PEG-3 gene can be used in methods for identifying agents that modulate PEP-3 expression or the ability of PEG-3 to induce progression, or for determining whether an agent is capable of inhibiting DNA damage and repair pathways, cancer progression or oncogene-mediated rannals and repair pathways, cancer progression or oncogene-mediated and ammals and vaccines comprising PEG-3 pulypeptides and an immune response enhancer are also claimed. Antibodies (especially monoclonal) to the PEG-3 may be used to determine tumour progression of a cells can be protected from chemotherapeutic damage by inhibiting or eliminating the expression of PEG-3 in the cells The methods can be applied to a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   tumorigenesis, angiogenesis or metastasis, to melanoma, brain, cervical, prostate, lung or colorectal cancer, neuroblastoma or glioblastoma (all

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                   713
